An analysis of the various correlation matrix visualizations and table of numerical values shows the primary determining factor is DIRECTING, followed by WRITING and then FILM EDITING.

Note: There was an issue with NA values; we could not get them to be ignored, so instead had to set them equal to 0, which may have resulted in some skewing of the results.

I took the summary table that Honey, Vuthy, James, and Sonya had created and added few graphics as well

Please note that i only took the summary with the below following columns: Category.Nominations, Count, Category.Winners, Count

Also, I loaded and shared the table as csv using dropcanvas website as per below

```
data1<- read.table(file= "http://dropcanvas.com/dcm0h/1", header = TRUE, sep=",")
str(data1)
```

```
## 'data.frame':    16 obs. of  4 variables:
## $ Category.Nominations: Factor w/ 16 levels "ACTOR LEADING ROLE",...: 16 8 9 1 2 6 11 5 13 4 ...
## $ Count                : int  80 78 69 59 55 54 50 48 45 36 ...
## $ Category.Winners     : Factor w/ 16 levels "ACTOR LEADING ROLE",...: 8 16 9 5 1 6 11 13 7 2 ...
